

FARHAN NASIR

Full-Stack AI/ML Engineer | Next.js | NestJS | AWS | LangChain | TypeScript

farhan.nasir91011@email.com · linkedin.com/in/farhan-nasir-884b17401 · github.com/farhannasir10
Open to Remote · Flexible across time zones · US / UK / EU clients

PROFESSIONAL SUMMARY

Full-Stack AI/ML Engineer with 4+ years of experience shipping production SaaS products, applied AI systems, and high-performance desktop software for remote clients across the US, UK, and EU. Started as a freelance engineer building applications end-to-end, then scaled into enterprise delivery at Tekvill. Deep expertise in LLM integration, RAG pipelines, embeddings-based retrieval, and AI workflow automation using OpenAI GPT, LangChain, and Hugging Face — combined with strong backend architecture in NestJS, PostgreSQL, and AWS, plus native 3D/desktop systems (Electron, C++, WebGL).

TECHNICAL SKILLS

AI / ML	OpenAI GPT, LangChain, Hugging Face, RAG Pipelines, Vector Embeddings, Semantic Search, Prompt Engineering, LLM Orchestration, AI Agents, Model Inference APIs
AI Eng.	Document Q&A, Content Generation, Workflow Automation, Context Management, Response Evaluation, Token Optimization, N8N AI Pipelines
Languages	TypeScript, JavaScript, Python, C++
Frontend	React.js, Next.js, Tailwind CSS, Electron, Three.js / WebGL
Backend	Node.js, NestJS, Express.js, REST APIs, Webhooks, Microservices, Node-API
Data	PostgreSQL, MongoDB, MySQL, Redis
Cloud	AWS (Lambda, RDS, Amplify, S3), Docker, Vercel, Git, CI/CD
Integrations	Stripe, Google OAuth, Email Automation, RBAC, Open3D, PCL

EXPERIENCE

Tekvill	2024 – Present
Full-Stack AI/ML Engineer	
- Deployed production SaaS platforms (Next.js, NestJS, PostgreSQL, AWS) for US, UK, and EU clients. - Built production LLM systems with OpenAI GPT, LangChain, and Hugging Face, including RAG pipelines and reusable AI microservices. - Designed scalable REST APIs, multi-role database schemas, and RBAC auth for vendor, admin, and user dashboards. - Integrated Stripe, N8N automation, and email workflows; cut manual client operations by 40%+.	

Self-Employed	2020 – 2023
Freelance Full-Stack & AI Engineer	
- Delivered 10+ full-stack applications and AI integrations for remote clients across US, UK, and EU markets. - Built custom SaaS products, marketplaces, and admin dashboards using React, Next.js, NestJS, and PostgreSQL. - Integrated OpenAI GPT and Hugging Face models for content generation, automation, and decision-support features. - Optimized PostgreSQL queries up to 60% faster; provided post-launch support across 10+ client projects with repeat engagements.	

SELECTED PROJECTS

eLUXE3D — High-Precision 3D Scanning Software
Electron · React · Three.js / WebGL · Node-API · C++ · Open3D / PCL · AWS S3
- Re-architected a 2005-era Windows jewelry scanning application into a split-stack desktop platform: React/Three.js UI with a native C++ computational engine for point-cloud processing, ICP alignment, Poisson reconstruction, and QEM mesh decimation. - Designed a zero-copy Node-API bridge to process 5M+ point scans without UI freeze; cut mesh file size by ~90% while preserving prongs and gem facets. Shipped signed Windows builds with AWS S3 OTA updates, hardware control (30–80mm FOV), 3D lasso crop, and CAD inspection/export (PLY/STL/OBJ).

Event & Vendor Booking Platform

Next.js · NestJS · PostgreSQL · AWS Lambda · RDS · Stripe

- End-to-end booking SaaS with user, vendor, and admin dashboards; Stripe payments, Google OAuth, and automated email workflows.
- Deployed on AWS Serverless (Lambda + RDS) — handling multi-role transactions with secure auth and production-grade API design.

Vendor Marketplace with Bidding System

Next.js · NestJS · PostgreSQL

- Marketplace with real-time custom bidding, vendor inventory management, and administrator oversight dashboards.
- Optimized backend queries and API layers for high-traffic listing pages, improving load performance across core endpoints.

AI Integration & Intelligent Automation Platform

OpenAI GPT · LangChain · Hugging Face · RAG · N8N

- Production RAG pipeline: document ingestion, chunking, vector embeddings, semantic retrieval, and LLM response generation via LangChain.
- Modular AI service layer with prompt templates, Hugging Face inference endpoints, and N8N orchestration for multi-step client workflows. Reduced repetitive manual operations by 40%+; built evaluation flows to improve prompt accuracy and control token costs at scale.

EDUCATION

PUCIT — Bachelor of Science in Computer Science (BSCS)

2020 – 2024

Punjab University College of Information Technology

REMOTE COLLABORATION

Open to remote roles. Experienced working with US, UK, and EU clients. Async communication, sprint delivery, and cross-timezone collaboration.

Client project codebases are private. Technical walkthroughs and architecture discussions are available upon request.
